- Annual Flower Seeds -

Of the most important items listed we have indicated the number of seeds per ounce to better enable you to figure the amount of seed you'll need for your planting requirements. Keep in mind that you cannot expect every seed to germinate f.i. most large seeds germinate from 60 to 80 percent under normal germinating conditions, sometimes a higher percentage is obtained, which means that a little more seed is required to obtain the number of plants desired.

Temperature: A minimum of 60-65 degrees is necessary for germination. Seed should germinate in 3 or 4 days in summer, 7 or 8 days in winter. A night temperature during the normal firing season of 48 to 50 degrees should be maintained to grow good Snaps.

Planting: You may bench seedlings direct if space is available — less labor and better growth. For winter single stem crop space 3x6 inches and 3x5 inches for late spring and summer crops. Pinched crops 7x8 inches. Pinch plants after they have been benched and taken hold, about 8 inches high to leave 3 pairs of leaves.

PINCHED CROPS for Winter and Early Spring Flowering. Seed should be sown about a month earlier to have them in bloom according to the above flowering dates given.

"SAKATA'S" ALL-DOUBLE FLOWERING SNAPDRAGONS

Suitable for both **INDOOR** and **OUTDOOR** culture. For greenhouse flowering during winter and spring they should be sown early, preferably from July through September. To obtain maximum results, they require more spacing, more sunlight and fertilizer than single types. When properly grown, the beautiful sturdy, long spikes covered with large double flowers is something you cannot find in singles. For summer flowering outdoors, winter sowing is recommended (February and early March). If sown in late spring they tend to be short spiked with less flowers.

Strong and healthy plants with bushy growth, 1/3 to 1/2 less than the height of ordinary large flowered varieties. Under most conditions the plants develop no more than 1 1/2 to 2 ft. in height. Startling new colors being added each year to make a complete color mixture. New Century and Miss Universe, we think, are the largest flowered Zinnias in existence.

Zinnia "Giant Dahlia Flowered"

ZINNIAS

(see pages 51, 52, 53)

One of the most popular and easily grown annuals, Zinnias grow in most any soil, but do best in a sunny location and thrive on heat.

Most of our seed is grown by "Bodger's in California" introducers of the Dahlia Flowered and California Giant or Mammoth types, therefore, insuring you of the best in Zinnias your money can buy.

From "Burpee's" another pioneer in the Zinnia field come the newer varieties - Burpee Hybrids - Super Giants - Floradale Beauty - etc.

Others from "Darold Decker" a well known hybridizer in Chula Vista, California.

Zinnias require a warm temperature, 65° minimum-better, 70° — to germinate satisfactorily.
